VacuFunPlayer 1.0.2 - connect VacuGlide2 to MPC-HC or HereSphere

[HeelsLover69](#) Patron

Jan 2

About

I created a tool to connect VacuGlide 2 to MPC-HC or HereSphere. It works like a simple version of MultiFunPlayer but just with VacuGlide 2. As an additional feature, the script can be temporarily modified before uploading to VacuGlide 2, similar to FunExpander, because I think VacuGlide 2 is better synchronized with the script if the script just contains full strokes. The original script remains untouched. Furthermore, the "Stroke minus" and "Stroke plus" valves can be controlled via the keyboard.

I created this software in my free time for my personal use. It was extensively tested on my system with my configuration and works very well.

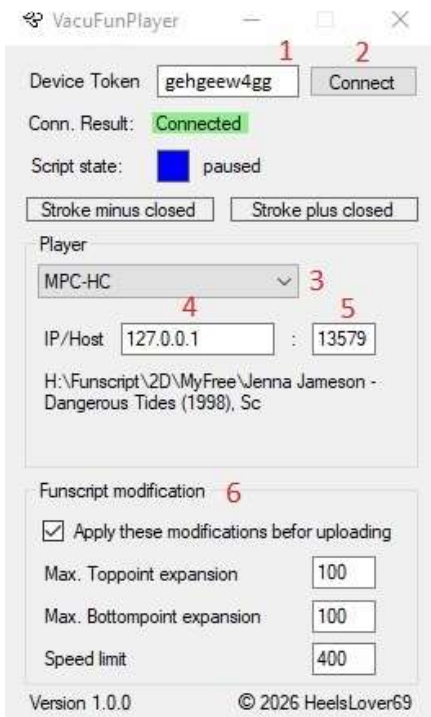

I have testet:

- MPC-HC local (127.0.0.1)
- XBVR local (127.0.0.1)
- HereSphere on Meta Quest 3

I have not testet:

- MPC-HC via Network
- XBVR via Network
- HereSphere local, but should work, SMB should work too.

Instruction

1. Enter your device token
2. Connect to your VacuGlide 2 (VacuGlide 2 has to be in online mode)
3. Choose your videoplayer (MPC-HC or HereSphere)
4. Enter IP of MPC-HC (127.0.0.1 = local) or HereSphere
5. Enter Port of MPC-HC (13579 = standard) or HereSphere (23554 = standard)
 - 5a. Enter IP and Port of XBVR
6. Activate or deactivate Funscript modification

Open valve "Stroke minus" by pressing NumPad "0" (zero), close valve by release the button.

Open valve "Stroke plus" by pressing NumPad "." (dot), close valve by release the button.

Updates

Version 1.0.1 / 2026-01-05

- Bugfix: the valves were not always reliably closed.

Version 1.0.2 / 2026-03-11

- Added RVP (Random Video Player) support. Select "MPC-HC" as "Player" and activate SCRIPT/Enable Timecode Server in RVP. RVP Port is 13579 (fix)

Thank you very much for this! Dragging every video and funscript into the online player was becoming a chore.
